# Introduction

This is the tenth comprehensive annual report describing discharge episodes from subacute inpatient rehabilitation programs provided by Australian facilities that are members of the Australasian Rehabilitation Outcomes Centre (AROC)<sup>1</sup>.

The inaugural report was published in April 2007 and described the 2005 data; this tenth instalment describes the 2014 data.

The provision of rehabilitation in Australia continues to grow in volume, with 2014 seeing a 2.0% real increase in inpatient episodes of rehabilitation provided. Once again the majority of that volume growth is coming from the reconditioning impairment group.

# Change in outcome measures, 2000 to 2014

# Funding source for rehabilitation in Australia, 2014

# Outcomes by impairment

A series of figures and tables are provided for each impairment category; these outline the key descriptive data for 2014, changes in episode volumes between 2010 and 2014, and changes in rehabilitation outcome measures between 2013 and 2014:

- The first figure in each category outlines the number of episodes for each quarter over the past five years, and documents any changes in episode volume over time and/or seasonal trends.
- The second is a table outlining key 2014 data for the respective impairment category by version 3 of the AN-SNAP class.
- The third figure provides a summary of the discharge destination of all episodes by AN-SNAP class.
- The fourth figure provides a graphical representation of 2014 length of stay (LOS) and improvement in the FIM (Functional Independence Measure) by AN-SNAP class.
- Finally, the fifth figure presents the key changes in rehabilitation outcome measures between 2013 and 2014. The horizontal axis describes the difference between the 2013 and 2014 averages, while the actual 2013 data are presented on the left side of the graph.
